

Refund Policy

Refund Eligibility

Customers may request a refund for eligible purchases when the request meets the conditions specified in this Refund Policy. The customer must provide a valid order reference, registered email address, and proof of purchase when submitting a refund request.

Refund eligibility is determined based on the purchase date, product or service type, reason for the refund, product condition, usage status, and any applicable refund restrictions.

A refund may be considered when the purchased product is defective, damaged, incorrectly supplied, or cannot be used due to a verified technical issue.

Customers must provide accurate information when submitting a refund request. Incomplete, incorrect, or misleading information may result in delays or rejection of the refund request.

Refund eligibility does not mean that every refund request will be automatically approved. Each request is reviewed individually according to the applicable refund conditions.

Refund Time Limit

Customers may submit a refund request within 15 calendar days from the original purchase date.

The refund period begins on the date the payment is successfully completed or, for physical products, the date the order is delivered, where applicable.

Refund requests submitted after the applicable refund period may be rejected unless an exception is approved by the support team.

Customers are responsible for submitting their refund requests within the applicable time limit.

If a customer experiences a technical issue or delivery problem near the end of the refund period, the customer should contact support as soon as possible and provide details of the issue.

The date on which the refund request is submitted will be used to determine whether the request was made within the applicable refund period.

Eligible Products and Services

Refunds may be available for products or services that meet the eligibility requirements of this policy. Physical products may qualify for a refund when they are defective, damaged, incorrectly delivered, or otherwise meet the applicable refund conditions.

Digital products may qualify for a refund when a verified technical problem prevents normal access or use of the purchased product.

Services may qualify for a refund when the service was not delivered as described or when a verified service-related issue meets the applicable refund requirements.

Customers must provide the order reference and relevant purchase information so that the support team can verify the product or service associated with the refund request.

Eligibility may vary depending on the type of purchase and the reason provided for requesting the refund.

Non-Refundable Products and Services

Purchases that do not meet the eligibility requirements may not qualify for a refund.

Refunds may not be provided for products that have been used, altered, damaged, or modified by the customer beyond normal inspection or use requirements.

Digital products may not qualify for a refund when the customer has successfully accessed, downloaded, or used the product and no verified technical issue exists.

Services that have been fully completed or consumed may not qualify for a refund unless the service issue meets an approved exception.

Refund requests submitted after the applicable refund period may be rejected.

Refund requests containing false, misleading, or unverifiable information may also be rejected.

Product Condition Requirements

Physical products submitted for a refund must be returned in an acceptable condition according to the applicable return requirements.

Products should include the original accessories, components, packaging, or other items provided with the purchase when applicable.

Products that have been damaged due to misuse, unauthorized modification, improper handling, or accidental damage may not qualify for a refund.

The support team may request photographs, videos, order information, or other relevant evidence to verify the condition of the product.

The returned product may be inspected before the refund is approved.

If the returned product does not meet the required condition, the refund request may be rejected or adjusted according to the applicable refund terms.

Digital Product Refunds

Digital products may be eligible for a refund when a verified technical problem prevents the customer from accessing or normally using the purchased product.

Customers requesting a refund for a digital product must provide the registered email address, order reference, product details, and a description of the technical issue.

The support team may request screenshots, error messages, device information, or other relevant details to verify the reported problem.

Customers may be asked to follow basic troubleshooting steps before a refund is approved.

A refund may not be approved when the digital product is functioning correctly and the customer has successfully accessed or used the product.

Technical issues caused by unsupported devices, incompatible software, incorrect customer configuration, or failure to meet stated system requirements may not qualify for a refund.

Defective or Damaged Products

Customers who receive a defective or damaged product should report the issue as soon as possible after delivery.

The refund request should include the order reference, registered email address, description of the defect or damage, and supporting photographs or other evidence when available.

The support team reviews the reported issue to determine whether the product was defective or damaged before or during delivery.

If the defect or damage is verified and the request meets the refund requirements, the refund may be approved.

Customers may be required to return the damaged or defective product before the refund is processed.

Damage caused by customer misuse, accidental handling, unauthorized modification, or improper storage may not qualify for a refund.

Refund Verification

All refund requests are reviewed by the support team before approval.

The verification process may include checking the order reference, purchase date, payment status, registered customer information, product type, refund reason, and previous refund activity.

For damaged or defective products, the support team may review photographs, videos, delivery information, or other evidence provided by the customer.

For digital products, the support team may verify account access, technical errors, product usage, and reported system issues.

Customers must provide accurate and complete information during the verification process.

Additional information may be requested when the submitted details are insufficient to determine refund eligibility.

Refund processing will begin only after the refund request has successfully passed the required verification process.

Refund Approval and Rejection

A refund request may be approved when the customer meets the applicable eligibility requirements and the submitted information has been successfully verified.

The customer will receive confirmation when the refund request is approved.

A refund request may be rejected when the purchase is outside the applicable refund period, the product is not eligible, the required information is missing, or the reported issue cannot be verified.

Refund requests may also be rejected when the product has been misused, modified, or damaged by the customer.

If a refund request is rejected, the customer may contact customer support to request clarification regarding the decision.

Submitting a new refund request does not guarantee approval if the original eligibility conditions have not been met.

Refund Processing Time

Approved refunds are normally processed within 5 to 7 business days after approval.

The processing period begins after the refund has been approved and all required verification or return requirements have been completed.

The time required for the refund to appear in the customer's account may vary depending on the bank, payment provider, card issuer, or payment method.

Weekends and public holidays may affect the time required for the refund to be reflected in the customer's account.

Customers should allow the full processing period before reporting a refund as delayed.

Refund Method

Approved refunds are normally issued to the original payment method used for the purchase.

Payments made by credit card or debit card are refunded to the applicable card account.

Payments made through supported digital payment methods are refunded according to the payment provider's applicable processing procedures.

A refund may not normally be transferred to a different payment method or account unless an alternative method is specifically approved by the support team.

Customers may be required to provide additional information when the original payment method is no longer available or cannot receive the refund.

The actual time for the refunded amount to appear in the customer's account depends on the payment provider or financial institution.

Refund Status Tracking

Customers can contact the support team to check the status of a submitted refund request.

The customer should provide the order reference and registered email address when requesting an update.

Refund requests may have different processing statuses, including pending verification, under review, approved, rejected, processing, or completed.

A refund marked as approved indicates that the request has been accepted, while the actual credit to the customer's account may require additional processing time.

Customers should check their original payment account after receiving confirmation that the refund has been processed.

If the refund does not appear after the stated processing period, the customer should contact support with the order reference and refund confirmation details.

Customer Support for Refunds

Customers can contact customer support for questions regarding refund eligibility, refund requests, verification, approval, processing, or refund status.

When contacting support, customers should provide their registered email address and order reference to allow the support team to locate the relevant purchase.

Customers should clearly describe the reason for requesting the refund and provide any requested supporting information.

Support agents may request additional details when the refund request cannot be verified using the information initially provided.

Customers can contact support for clarification if a refund request is rejected or if an approved refund has not been received after the applicable processing period.

All refund-related requests are reviewed according to the conditions and requirements specified in this Refund Policy.
